

## Screw Pump Repairs with Devcon

Twin screw pumps are commonly used in a wide range of applications in oil extraction, oil refineries, the chemical industry and on board oil tankers to name but a few.

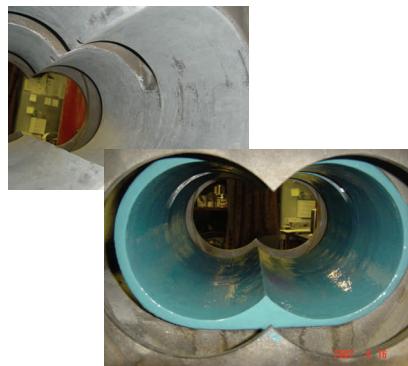

When repair and maintenance work on the pumps is required, parts no longer need to be replaced but can be easily repaired using Devcon epoxies. The convenience of using Devcon epoxies in such applications enhances the cost-effectiveness of the production process with a quick and easy application therefore reducing and preventing costly downtime.

Demonstrating this, the screw pumps on board oil tankers VIMSI and RISTNA have been repaired with a range of Devcon products. Engineers discovered the screw-housing gap had increased up to 3mm as a result of radical abrasion and corrosion. In order to get them fully operational with minimal downtime, repairs were carried out by screw finish machining, sandblasting of the housing and then degreasing using **Devcon Fast Cleaner**.

The housing was then restored using Devcon Titanium Putty, which was manually machined with the use of a control pattern. Finally **Devcon Brushable Ceramic Blue** was applied to create a protective barrier against future abrasion, erosion or chemical attack.

As a result of the repair work, both pumps are operating at 98-99% of their normal capacity. Another successful repair using Devcon products which helped the engineers to overcome the limitations of materials/parts and prolonged the life of the equipment.

## MMP supplies Mexican gas rigs

MMP's International Export Manager Don MacKenzie and his Mexican distributor Maki, have successfully secured a number of orders to supply a range of products to Pemex (Petroleos Mexicanos), Mexico.

Pemex own and operate all gas rigs in the Mexican sector of the Gulf of Mexico. MMP will now be able to supply a range of repair and anti-slip products to Pemex engineers, who are responsible for the maintenance and safety on the gas rigs.

# Devcon Tru-Bond Light Cure Adhesives

Tru-Bond™ light cured adhesives are single component, 100% solids, solvent free formulations designed to replace costly two-part systems, die-cut films and tapes whilst offering the flexibility of unlimited open time plus the productivity of instant cure when exposed to UV/visible light.

## Tru-Bond™ 18100 Series - Glass Bonder

- Provides durable, high strength bonds
- Cures rapidly even through translucent substrates
- Optically clear, non-yellowing
- Also bonds to various metals and ceramics

### Markets

Display Manufacturers  
Optical Components  
Glassware/Furniture Manufacturing

Attach pewter ornaments to glass

## Tru-Bond™ 18200 Series - Plastic Bonder

- Bonds a wide range of plastics
- Flexible and resilient
- Superior impact resistance
- Excellent thermal cycle properties

### Markets

Sign and Display Manufacturers  
Sports Apparel  
Film and Sheet Lamination

Attach plastic beads to glass

## Tru-Bond™ 18300 Series - Dual Cure Protective Coating / Potting

- Light and/or heat cure
- Optically clear, tack-free encapsulant
- Minimal shrinkage for potting up to 3/4"
- Coating will not scratch or mar

### Markets

Electrical/Security  
Jewellery, Crafts and Signs

Optically clear coating to protect pins

## Tru-Bond™ 18400 Series - Pressure Sensitive Adhesives (PSA)

- Liquid formula that instantly cures to a PSA
- Bonds any substrate...including polypropylene
- Dispense, cure and then assemble when required
- Medical USP Class VI approved

### Markets

Sign and Graphic Assembly  
Industrial/Electronic  
Medical

Adhesive applied to aluminium collar
